

Liquid Dishwashing Soap

Makes approx. 500-600 ml | Squirtable bottle

INGREDIENTS

- 40-60 g grated natural bar soap (about 1/2 of a 100 g bar)
- 500 ml warm distilled water
- 1-2 tsp washing soda, dissolved first in a little hot water
- 1-2 tsp vegetable glycerin, optional (adds mildness and viscosity)
- Optional: a small pinch of citric acid or a few drops of lemon juice - add just before use, do not store in the bottle

INSTRUCTIONS

1. Dissolve the washing soda in approx. 100 ml hot water.
2. Add the remaining water and grated soap. Stir gently until fully dissolved (5-10 minutes).
3. Stir in the glycerin. Let cool completely.
4. Pour into a squeeze bottle. Shake well before each use.

USAGE

1-2 squirts per sink of hot water. For very greasy pans, sprinkle extra baking soda directly on the pan and scrub.

Why 40-60 g? Effective but not overly thick or drying. Adjust water to thin or thicken to your liking.
